About Us

Our client is a rapidly growing SaaS startup transforming the professional services industry through a cutting-edge, user-focused platform. A mission is to help professionals work smarter and faster by delivering innovative technology that drives efficiency. If you enjoy building complex features and thrive in a dynamic environment, we'd love to have you on board.

The Role

We're looking for a talented **Full Stack Software Engineer** with strong proficiency in **Python** (back-end) and **React (front-end)**. You'll play a key role in designing and developing scalable, high-performance applications—from crafting seamless user interfaces to managing robust backend systems.

Key Responsibilities

- Develop and maintain scalable, end-to-end web applications using React (front-end) and Python (back-end).
- Collaborate closely with product managers and cross-functional teams to define requirements and deliver robust, user-centric solutions.
- Write clean, reusable, and efficient code that adheres to industry best practices.
- Design and implement APIs, ensuring smooth integration between front-end and back-end components.
- Optimize applications for performance, scalability, and security.
- Own the testing, debugging, and troubleshooting process to maintain high-quality code and system reliability.

Optional Al Responsibilities (for candidates with an interest in Al)

- Research and prototype Al-powered features such as intelligent search, summarization, and document indexing.
- Contribute to the deployment of AI models, focusing on scalability, performance, and real-world applicability.
- Explore ways to integrate LLMs and machine learning advancements into core product functionality.

Required Qualifications

- 5+ years of experience as a Full Stack Developer, with strong end-to-end application development skills.
- Advanced proficiency in **Python** for back-end/server-side development.
- Deep experience with React and front-end technologies (HTML5, CSS3, JavaScript).

- Solid understanding of relational databases (e.g., PostgreSQL, MySQL).
- Experience working with **RESTful APIs** and version control systems like **Git**.
- Comfortable working in an agile, fast-paced environment with evolving priorities
